Third-party applications In addition to the multitude of autocad add ons, Autodesk hosts two fully integrated, third-party applications that are designed to be a more efficient alternative to the 2D AutoCAD Suite: Autodesk AutoCAD Cloud for 3D allows users to access and edit any AutoCAD drawing model through a browser. Autodesk AutoCAD 360 is designed for creating and sharing interactive 3D models. In addition, Autodesk offers a choice of free or subscription-based, online CAD services. Additionally, in 2016, Autodesk introduced the AutoCAD 360 suite of software for the creation and management of interactive 3D models, along with an accompanying cloud service and marketplace. The free, non-subscription offering of the AutoCAD 360 suite, which includes AutoCAD 360 Design and AutoCAD 360 Project, is available from the Autodesk website. For commercial use, AutoCAD charges for a license that also covers AutoCAD LT and is usually also available for free to schools, governmental organizations, or other non-profit entities. AutoCAD is integrated into numerous CAD-enabled workflows. Some CAD packages require a license in addition to any necessary software and support. The injection molding process generally includes plastic or rubber being heated and then injected into a closed mold. The heated plastic or rubber is then typically cooled and cooled at least partially. Thereafter, the components are removed from the mold and used. In the past, the injection molding process has been used to produce a large variety of plastic or rubber parts that are generally simple in structure. However, there are many applications for more complex parts, such as plastic or rubber parts with one or more of the following: interior parts, surfaces that are not flat, intricate surfaces, internal ridges or perforations, external ridges or perforations, complex geometry, flexible geometry, structural geometry, and structural geometry that is shaped so as to resemble another object. In order to meet the demand for these complex parts, injection molding processes have been created to build three-dimensional or even four-dimensional structures, as well as complex
