Enterprise is also available as a subscription-based service. Although AutoCAD was primarily a drafting program, it has grown into a solution for architectural, engineering, and construction (AEC) professionals and anyone who needs to draw or edit 2D or 3D designs, plans, and models. AutoCAD is also an interactive presentation tool that allows users to create immersive, customized presentations that can be embedded in web pages, reports, and presentations. In this guide, we'll cover the basics of AutoCAD and AutoCAD Enterprise, AutoLISP, and how to use the application's drawing tools to create 2D and 3D drawings. We'll also introduce readers to several enhancements in AutoCAD 2012 and AutoCAD Enterprise. Visual LISP Visual LISP is a dynamic, object-oriented and procedural language developed by Autodesk. It is a variant of AutoLISP that provides a more complete object-oriented environment. VBA VBA (Visual Basic for Applications) is a toolkit for Microsoft Office, which enables the development of macro applications. AutoCAD Download With Full Crack VBA is an extension of AutoLISP that allows the user to write VBA in a similar style to AutoLISP. .NET .NET is a general-purpose object-oriented programming language for the Microsoft Windows operating system. Features 3D The 3D feature of AutoCAD allows users to create and manipulate 3D models in 3D space. It has been used to create architectural designs and other geometric modeling tasks. Unlike CAD application rivals, Autodesk has not released a 3D design application based on the free Autocad cloud. AutoCAD allows basic user to make 3D drawings easily. They can create complex 3D drawings using the 3D features of the application, which allows the user to rotate the 3D objects to explore the topology of the model. The 3D features allows the user to "tilt" objects like wind turbine blades, to explore their strength or bending properties and even zoom in the model. Tools Technical editing tools AutoCAD provides a series of technical editing tools that can be accessed by right-clicking in the drawing area. Q: How can I reduce the amount of items I have to "unsubscribe" from when I make a request to a Google Maps API? I'm making requests to a Google Maps API to get markers and info windows for the pins I have stored in a Google Map. I've got a PHP function to load all the markers and info windows into an array, but it seems like the only thing I can do with the array is add markers and info windows to the map at a given time. The issue is that if I'm just adding a single marker, the request for the info window is always made when the page loads, which causes the popup to open. Is there a way to add markers and info windows without making so many requests? A: You can attach a single handler function to the map. Here's an example:

```
function initialize() { var map = new google.maps.Map(document.getElementById('map'), { center: new google.maps.LatLng(-23.57375, -46.86119), zoom: 14 }); var markers = []; for (i = 0; i

Drafting, design, annotation and presentation: Easily generate building blocks and layouts using drawing tools. Share and collaborate with others by commenting on and annotating your drawings. (video: 1:15 min.) Add a single point to your drawing: Using the 3D command, select, manipulate, and remove any one point from your drawing. Place this point in any location on your model, or on a plane, a surface or a volume. (video: 1:15 min.) Drape and digitise: Add lines, curves, arcs and splines to your model, change its attributes, or quickly reorder any lines. Multi-view printing: Print to canvas, paper, and save in your native CAD format. Export to PDF and upload to a server for remote viewing and collaboration. You can save and share your PDFs directly from AutoCAD. (video: 1:15 min.) CAD standards: Save and print with 1:1, 1:2 or 1:3 scaling. Produce PDFs that are scalable from different scales to PDF, and supports both TrueType and OpenType fonts. Automatic import: You can now import a single geometry to your drawings with one mouse click. Other commands that you use to define the geometry are supported in this mode. Multi-layered views: Create and manage multiple views and groups in your drawings, and switch back and forth between them with the F4 hotkey. Dual-pan: Pan between two layouts simultaneously, with a single mouse click. Switch between them using the F5 hotkey. Quick hide/show: Quickly hide or show objects using the Alt key and F5 hotkey.
